What's New in QuarkXPress 10.2

This document provides an introduction to the new features in QuarkXPress 10.2

New features

Nested anchored boxes

You can nest anchored objects by anchoring a box (or a line or table) inside an anchored box. Anchored boxes can be nested as deep as you like with no limit.

Hyphenation exceptions

Hyphenation exception lists can be stored in separate .xml files. These .xml files can than be imported into your project and also exported and shared with other users and projects. This allows the same list of hypenation exceptions to be used in multiple projects.

Hyphenation Exceptions can be made as a Job Jacket resource using externalized XML file. When Hyphenation Exceptions are made as a Job Jacket resource, you can synchronize the hyphenation exceptions between the projects/layouts either by making changes in the layout or external Hyphenation Exceptions (XML) file.

Notes and redline

Notes and Redlining are now an integral part of QuarkXPress and will be automatically installed. You no longer need to have the Notes and the Redline XTension software installed.

Adaptive resolution

Adaptive resolution allows users to set a preference for the display resolution of images in their projects. The display resolution can be set only when there are no open projects and the changed settings will affect all projects opened after the change. You can choose between **Quality** and **Performance** rendering of images.

Choosing **Quality** will cause images to be rendered in the best possible quality. Choosing **Performance** will give you better perfomance while working with images (faster moving, panning etc), but the quality of the image will be compromized.
